

Microsoft Sharepoint Services

SharePoint Services is a web-centric document management technology with project collaboration, document workspace, meeting sub-site and discussion board features that allow organisations to collaborate and share information online. It is a versatile solution that lets you maximise the efficiency of your business processes and improve productivity, whilst also adding a layer of security and business continuity.

SharePoint lets you improve productivity with easy-to-use collaborative tools. As your organisation grows, the number of files you have will increase exponentially, and it can become difficult to keep track of all of your documents. With SharePoint you can keep your files in a central location that can be accessed easily and quickly by team members, regardless of where they might be working from. It provides access control and revision control for documents and allows users to create sites for use within a company intranet. SharePoint enables teams and individuals to connect and collaborate together, and integrates well with existing line-of-business applications.

Key benefits

SharePoint collaboration services provide an always-available place via your web browser to share documents, project plans, ideas, contacts, announcements, calendars and anything else your team needs. You can add internal and external users and access from anywhere. This is an excellent option for sharing and collaborating with Microsoft Office and associated document types. SharePoint also supports versioning, which can help ISO certified businesses track document workflows.

Get started quickly

SharePoint Services gives IT departments the ability to implement a dependable, fully scalable collaboration infrastructure with minimal administrative time and effort. Because it can work smoothly with familiar tools like the ones in Microsoft Office, users can quickly get up to speed. Version 3.0 also comes with an improved user interface and site creation tools to provide easy-to-use templates, professional-looking site themes and the ability to rearrange site navigation from within the browser.

Collaborate easily and effectively

Help teams stay connected and productive by providing easy access to the people, documents and information they need to make more informed decisions and get the job done. Enhancements in Windows SharePoint Services 3.0 make it easier than ever to share documents, track tasks, use e-mail efficiently and effectively, and share ideas and information. A variety of communication features let users know when actions are required or important changes are made to existing information or documentation, including announcements, sophisticated alerts, surveys, discussion boards and RSS. Enhanced features include the option to require document check-out before editing, the ability to view past revisions and restore to previous versions, and the ability to set document-specific security controls.

Web-based applications

With SharePoint Services 3.0, IT professionals can create new and efficient, web-based tools, services and workflow scenarios specific to the organisation, department, business process or industry sector. Because it offers a highly customisable and extensible platform, companies can tie these new tools and services to existing applications, making the most of existing IT investments for increased cost-effectiveness.

Work with Cloudserve to drive your off-premise strategy and efficiently reduce costs without giving up control.

Easy to use file sharing with rapid deployment functionality

Benefits

- Accessible from any location with an internet enabled device
- Low cost per user
- Easy to setup and use
- Out of the box "look and feel" templates
- Integrates with all Microsoft products including Hosted Exchange
- Sites secured with SSL 128-bit encryption Anti-Virus protection

SharePoint Services lets you:

- Increase the security of your business-critical information
- Empower site managers and teams
- Provide more robust document storage
- Manage business documents more easily
- Ensure integrity of content
- Build a collaboration environment quickly and easily
- Easily scale your collaboration solution to meet business needs
- Control access to information and set policies for site creation
- Simplify the creation and navigation of workspaces
- Work with familiar productivity tools (e.g. Microsoft Office)

Growth spurt?

Because you only pay per user and per GB of storage, you can easily increase your file sharing needs as your business expands.

Make your IT infrastructure more manageable

Increase control over and enhance the security of your organisation's data and information resources. SharePoint Services helps you to reduce the dependency of business units on your company's IT department for site provisioning, implementation, backup and support by providing exceptional administrative controls for managing content, users and sites. This means that users can operate more efficiently and effectively, while reducing the burden on your IT team. Version 3.0 also provides more sophisticated and flexible security, as well as greater control over security settings and permissions.
