

Cloud Storage

With obligations to retain ever-increasing amounts of data for longer periods, businesses are finding it harder than ever to keep everything in-house. Cloudserve provides a secure cloud-based service for storing, managing and sharing any kind of data. This increases productivity, adds value and cut costs immediately.

As part of our range of 'IT on demand' services, Cloudserve now deploys the highly secure Mezeo Cloud Storage Platform™. This is a highly secure platform offering SSL encryption of files for transfer and 256 bit AES encryption in storage. Our cloud storage service integrates seamlessly with our other hosted IT services such as Hosted Desktops, Hosted Exchange, Hosted SharePoint etc. to provide a single computing environment characterized by its interoperability and efficiency. Users can upload, store and instantly share files of any type or size, including documents, presentations, PDFs, web site graphics, photos, videos, music and more.

Key benefits

Data storage requires power, space and capital expenditure – hence the growing demand for off-site storage and, specifically, cloud storage. This involves the delivery of data storage as a service, via the internet, and is usually billed on a utility computing basis. Cloud storage platforms allow organisations to cut costs and eliminate the burden of management, giving them the freedom to focus on their core activities.

Safe and secure

All data resides in our data centres rather than on local machines, so it cannot be lost or stolen, nor is it subject to individual hardware failure. Because the applications are constantly backed up, data cannot be accidentally erased or corrupted. It is transmitted using industry-standard SSL encryption, as used for online banking and by the likes of Amazon and Tesco.com. This means that it's impossible for outside parties to access your data. We run multiple data centres on a highly available, fully resilient, constantly mirrored, Grid computing model to ensure 99.99% availability even in the unlikely event of a disaster at one of our facilities.

Suitable

Cloud storage is ideal for storing and managing data of any kind, with applications including off-site backup for disaster recovery and business continuity, business collaboration, web development, online content service providers, and photo, music and video sharing.

Instantly scalable

A true cloud computing model means you can add and remove resources as and when you need them.

How can Cloudserve help?

Cloudserve's cloud storage service offers core advantages, automated services expertise, and industry-leading Private Network to provide the highest level of security, flexibility, and ease of use. It is available as a stand alone service, or can be seamlessly integrated with Cloudserve's other hosted services to create a unified computing environment with unequalled efficiency and interoperability.

Work with Cloudserve to drive your off-premise strategy and efficiently reduce costs without giving up control.

Secure, reliable data storage

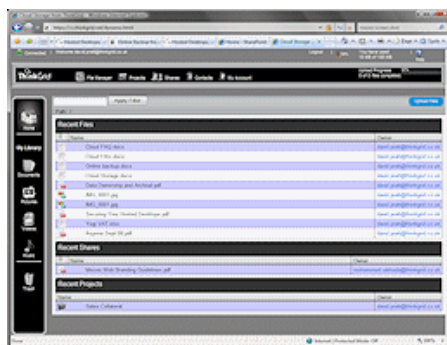

Key features:

- Pay-as-you-go pricing
- Seamless integration with other Cloudserve services
- Instant scalability
- Anywhere access
- Support for all file formats
- Advanced security
- Permission management
- Streamlined sharing and linking

Cloud storage technologies in essence allow you to store your documents and data in data centres instead of on your local PC or office server. Having data centrally available means that you can share it with colleagues and other users and it becomes easier to manage.

Access and control

You connect to the data just like you would if you were using your local hard drive or shared file server, i.e. you have a drive in "My Computer" which you can save to. Simply install a small client on to your PC, hosted desktop or laptop etc. You can then drop files and data into the drive and through a web interface share with other users. You can manage access to your files with the web interface. You can also just access the data from the web without installing any clients - all you need is a web browser.
