CLOUDSERVE - SMB CLOUD COMPUTING

We deliver affordable and cost-saving cloud computing services to SMB businesses. Access all your IT needs online for a simple and low cost monthly fee.

WHAT IS DIFFERENT ABOUT CLOUDSERVE?

Unlike managed service providers and IT support companies, Cloudserve's solutions are based entirely on the principles of Cloud Computing.

Cloud Computing enables businesses to access the IT services they need without extensive infrastructure investment or complex services deployed in-house.

At the heart of our philosophy is the idea that businesses should only pay for the resources they need, but should also be able to access additional resources at the touch of a button. This notion of a truly scalable infrastructure, available on a simple, transparent, monthly subscription underpins all our offerings and allows us to provide affordable, enterprise class IT provisioning to businesses of all shapes and sizes.

Cloudserve simplifies complex and often expensive IT services and makes them consumable for all types of business. We deliver the complete array of IT and communications services.

For more information simply visit our website or give us a ring.

WHAT IS CLOUD COMPUTING?

In essence, it means having a range of IT services and resources such as desktops, networks and communications systems delivered to you without the need to own complex computing infrastructure.

These services are delivered securely over the internet, from a central datacentre so there's no need to worry about the management or maintenance of your systems - it's all included in the subscription.

This approach means that owning hardware and software will become a thing of the past - good for your pocket and good for the environment as well.

WHY CLOUDSERVE?

Traditionally, SMB's have had little choice but to buy expensive IT hardware & software and support their on-premise infrastructures in-house or via a managed service/IT support provider.

Cloudserve provides a cost effective and far simpler alternative. We provide businesses with the latest IT functionality direct from our state-of-the-art fully redundant data centres. A business simply accesses the IT systems it requires through their Internet connection without the need to invest in or maintain complex in-house equipment.

At the core of Cloudserve's offer is the Hosted Desktop which replaces the need to provide and manage a full specification PC for each employee. Hosted Desktops are accessed either with a low-cost and power efficient Thin Client device or through an existing PC - an efficient way to extend the lifespan and processing capability of existing and older hardware.

Hosted Desktops combined with Cloudserve's range of cloud based services allows a business to gain access to all the IT functionality it needs to compete and succeed in today's business environment. Switch to Cloudserve and say goodbye to those expensive in-house IT systems.

No need to buy, install or manage equipment in-house

BENEFITS

- Substantial cost savings
- Hassle free
- Safe, secure and reliable
- Fully managed and supported 24x7

IS CLOUD COMPUTING RIGHT FOR ME?

Shown below are some typical examples where Cloudserve solutions can help a business streamline their IT and derive immediate cost-savings and efficiency gains.

| SCENARIO | PROBLEM | SOLUTION |
|--|--|--|
| Start-up business | No IT Infrastructure or experience | None needed with a fully managed online virtual infrastructure |
| Infrastructure upgrade due | Expensive hardware and software needed to replace legacy kit | Virtual hosted Infrastructure means no requirement for buying HW or SW |
| Growing business | Unpredictable future requirements | Desktops and resources available on-demand and fully scalable |
| Moving offices | Cumbersome infrastructure needs relocation or complete rebuild | Hosted Infrastructure housed in datacenter allow seamless transition |
| Workforce spread over multiple locations | Disparate infrastructure with no service consistency | All desktops & centrally managed, maintained and backed-up |
| Budget restrictions | Pressure on Capital Expenditure | No CapEx required, pay monthly |
| Company subject to Industry Regulations | Difficult to ensure employee compliance | Centrally managed and enforced user policies and data storage |
| Desktop refresh due | CapEx Required, Inefficient Model | No CapEx, Enterprise-Class desktop computing solutions available on-demand |
| Distributed workforce | All require access to corporate network | Anywhere, Anytime Global Access |
