

CLOUDSERVE® Group Management Pack

One of the biggest organisational challenges faced in business life today is IT administration. This is where the group management pack comes into its own. It gives customers a higher level of control of their users within a hosted desktop environment, as an optional add-on, so they can apply certain policies directly, amend accounts when needed and more.

Key features

- Shared file server
- Active Directory management
- User permissions management
- Group policy management
- Content filtering

Key benefits

Shared File Server

Customers who purchase the pack have access to 5GB of storage space on a dedicated server housed in our highly secure, state-of-the-art data centre. A shared file server allows you to collaborate with your colleagues wherever they are. A great replacement for the traditional "office file server". With the added benefits of being able to access anywhere, always backed up and always secure.

Active Directory Management

The foundation for Microsoft's identity and access management solution, Active Directory provides central authentication and authorisation services for Windows-based computers. Active directory lets you manage users, their access lists and create a way of providing single-sign on, i.e. A way to authenticate users against file servers, exchange, SharePoint etc and manage their access from one place.

User Permissions Management

User identities and permissions for data access are often subject to frequent change –usually as a result of personnel changes or new services coming online within an organisation. Traditional systems are difficult to maintain, therefore a system administrator is needed to manage them. The user permissions tools provide an easy-to-use interface for user management, and it does not require extensive IT knowledge. New users can be registered through a simple graphical interface, and the setting of their permissions can also be performed.

Group Policy Management

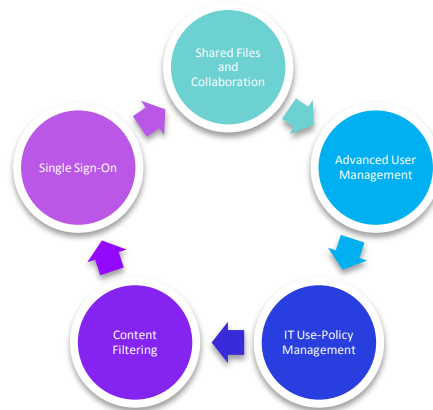

Maintaining highly reliable and secure Windows environments in a cost-effective manner is a challenge for many organisations. Group Policies provide the ability to centrally manage your workstation and server configurations while streamlining administrative tasks and reducing IT costs.

This allows you to:

- Centrally manage workstations and servers
- Lock down users and desktops
- Control Hosted Desktop configurations
- Create highly reliable and robust software deployment strategies
- Enhance security
- Troubleshoot failures

Content Filtering*

Make sure that employees do not view or download inappropriate web content by using content filtering. This can save your organisation time and money, limit bandwidth usage and protect you against malware as well as potential legal action.

Work with Cloudserve and our partners to drive your off-premise strategy and efficiently reduce costs without giving up control.

**Enjoy a
higher level
of control
over system
users!**

Why do I need it?

Cloudserve's Group Management Pack lets you take advantage of centralised authentication and authorisation services, simplifies user and network management and reduces IT costs while improving security. It is particularly useful when your company is expanding quickly and you have less time on your hands to oversee IT administration tasks.

For enterprise organisations

Our hosted desktop solution is perfect for companies who want the freedoms and cost efficiencies of a hosted desktop, but may also want to scale up and/or maintain more control of the system as they grow, especially those with 250+ users. Utilise Cloudserve as a private cloud, allowing you tactical desktop deployments or proof of concept deployments - without any investment - that can be used in minutes. Integrate our cloud with your network or domain with ease.
